

My name's Jonathan Clark. I'm a family physician, and I've been with Ephraim McDowell since 2000.

I'm actually from here in Danville, Kentucky. I graduated from Boyle County High School in 1989.

My family life's very important to me. My wife and I have three children. We enjoy spending time together and I also personally enjoy outdoor activities such as hunting and fish.

I wanted to become a doctor, really following in the steps of my parents. My father's a minister and my mother is a nurse and she worked at Ephraim McDowell for most of her career as well. So service was always an example in my family.

Well, I started out wanting to become a wildlife biologist and got derailed and somehow became a doctor. For undergraduate, I went to Georgetown College and then I graduated from the University of Kentucky medical school in 1997.

I chose family practice because I enjoy taking care of patients of all ages from birth to senior years and the importance of family is part of the reason I also chose that specialty.

Patients should expect a friendly environment and office staff, as well as a nurse and physician who's willing to listen to their concerns and address each of those concerns at their visit.

Our practice is full family medicine from birth to senior years, and we enjoy taking care of patients of all ages.

Probably the most rewarding part of my job is being able to take care of children and see them as they grow into young adults and into families. Since now, this is my 21st year in medicine, I'm taking care, actually, of children, of patients that I took care of when I first started. So that's been very rewarding.
